

SOD FARMS ♦ LAWN CARE

PROBLEM SOLVED!!

The inability to control bermudagrass infestations in zoysiagrass and St. Augustine turf has been a major challenge for turfgrass managers.

Until Now!

Recognition® herbicide is the latest Syngenta herbicide formulation that contains trifloxysulfuron, the active ingredient in Monument® 75WG herbicide, with a proprietary herbicide safener called metcamifen. Recognition also makes it possible to control bermudagrass with excellent safety to zoysiagrass and St. Augustine grown in lawns, landscapes, sod farms and golf courses.

Recognition alone does not control bermudagrass, but when tank mixed with Fusilade II at rates up to 24 fl. oz./A, the combination controls bermudagrass without injuring zoysiagrass and St. Augustine.

How is this possible? The safener in Recognition, metcamifen, triggers certain grass species to tolerate certain herbicides, like Fusilade II, without impacting its activity on weed species like bermudagrass.

**Increase Zoysiagrass sod yields 20 – 25%!
Reduce St. Augustine cutout and re-sodding!!**

SOD FARMS ♦ LAWN CARE

Application Instructions

Recognition	Fusilade II	Non-Ionic Surfactant
1.29 oz / Acre	24 fl. oz. / Acre	0.25% v/v 0.32 fl. Oz. / gal

Application intervals vary by time of year and growing conditions, but typically are four weeks for 12-18 fl. oz./A of Fusilade II or five to six weeks for 24 fl. oz./A of Fusilade II. The active ingredient in Fusilade II is foliar absorbed, so it is best to apply once the bermudagrass begins to regrow in treated areas.

Use typical spray volumes from 20-80 gal. of water/A
Use flat-fan nozzles that produce medium-to-coarse droplets to ensure uniform foliar coverage Provide adequate fertility and irrigation to encourage zoysiagrass growth and spread

The Numbers

Package Size	1.95 oz.
Cost / Package	\$163.80
Cost / Acre @ 1.29 oz	\$108
